

Sandblasted Matte

SUS 304, 5-10MM SOLID PLATE, INTEGRATED SINK CORNER

Lastra fabricates full-thickness SUS 304 solid stainless steel countertops to custom dimensions, not sheet metal over a plywood or MDF substrate. There's no showroom and no full-kitchen purchase required, so it works as a **standalone spec** for a single run, an island, or an outdoor kitchen. Below are the specs designers ask for most.

MATERIAL & THICKNESS

GAUGE	APPROX. WEIGHT	TYPICAL USE
5mm	~10.4 lb/sq ft	Vanity tops, light-use surfaces
6mm	~12.5 lb/sq ft	Standard kitchen counters
8mm	~16.6 lb/sq ft	Islands, heavy-use runs
10mm	~20.8 lb/sq ft	Statement pieces, commercial-grade

Grade SUS 304 stainless. Weights are per square foot of finished plate, excluding substructure.

FINISH

Sandblasted matte, standard on all orders. Hides fingerprints and light surface marks better than a mirror or brushed finish.

FABRICATION & ADD-ONS

- Integrated sinks, faucet cutouts, backsplashes, sidesplashes, appliance cutouts
- Solid plate only, no sheet metal fabricated over plywood or MDF substrate

COMPOSITION & CORROSION RESISTANCE

SUS 304 is an austenitic alloy containing 18% chromium and 8% nickel. These elements form the passive oxide layer that gives stainless steel its corrosion resistance.

ORDERING & LEAD TIME

PROCESS

Custom quote from dimensions and drawings → 50% deposit → fabrication → balance invoiced before freight booking

LEAD TIME

Approx. 6-8 weeks

SHIPPING

LTL freight to door, US & Canada. Client is freight consignee.

SAMPLES

Physical thickness/finish samples available on request, credited toward purchase

INSTALLATION NOTES

- Freight-to-door only, installation is arranged locally and not provided by Lastra
- Recommended adhesives: neutral-cure silicone (primary), polyurethane construction adhesive, or 3M VHB tape
- Confirm cabinet/substrate flatness and load support before install

HYGIENE & HEAT DURABILITY

- Non-porous, seamless surface with no grout lines, the same standard used in commercial kitchen and hospital environments
- Doesn't harbor bacteria the way porous stone or laminate seams can
- Withstands direct contact with hot cookware without scorching, warping, or discoloring
